## My Pets

What is the taxidermy itself? There is an animal, excise its skin from its body and make a same shape plastic body and cover it with the skin. Taxidermy project is a trial what happen if I change the form and put the skins different kind of shape...

In this project whose genre requires a hyperrealistic approach nevertheless mixes with the mythological, and the objects – use to be live animals – find themselves in absurd situations, causing them pain while being human toys.
